AWS Cloud Quest
Cloud Practitioner

PROFESSIONAL SUMMARY

DevOps & Cloud Engineer with hands-on experience in designing, deploying & optimizing scalable cloud infra, automated CI/CD pipelines, and high-availability database architecture on AWS. Hands-on expertise in network security (VPC, Subnets, Security Groups, IAM), load balancing (ALB/ELB), auto-scaling, and docker with exposure to Kubernetes, AWS EKS, Terraform (IaC) and Jenkins, GitLab CI/CD, AWS CodePipeline. Proficient in database performance tuning and Shell/Bash automation and zero-downtime production deployments with exposure to Prometheus, Grafana and ELK stack along with AWS CloudWatch. Delivered 60-70% AWS cost reduction, 99.9% uptime on Multi-AZ architectures and 60% reduction in manual operational cycles through automation.

TECHNICAL SKILLS

AWS	EC2, S3, VPC, IAM, RDS, RDS Aurora, Lambda, Application/Elastic Load Balancer (ALB/ELB), Auto Scaling Groups (ASG), Route 53, CloudWatch, CloudTrail, NAT Gateway, Internet Gateway (IGW), Multi-AZ Architecture, AWS EKS (exposure), Cloud Migration, Cloud Cost Optimization
Containers & Orchestration	Docker (Image Build & Configuration), Kubernetes (Working Knowledge), AWS EKS (Exposure), Container Deployment across Dev/Prod
Infrastructure as Code	Terraform (IaC Concepts and Practices)
CI/CD & Release	CI/CD Pipeline Design, Jenkins (exposure), GitLab CI/CD (exposure), AWS CodePipeline (exposure), Deployment Automation, Release Management
Scripting & Automation	Shell/Bash Scripting, Infrastructure Automation, Configuration Management
Operating Systems	Amazon linux, Ubuntu, Windows server
Networking	VPC Design & Subnetting, Route Tables, Internet Gateway, NAT Gateway, VPC Peering, Load Balancers, Network Security Fundamentals
Monitoring & Logging	AWS CloudWatch, Prometheus (exposure), Grafana (exposure), Splunk/ELK (exposure), Log Analysis, Incident Management
Web Servers	Nginx Basic configuration, Web Hosting
Version Control & Security	Git, GitHub, IAM Roles & Access Management, Security Groups, Least-Privilege Access, Compliance Controls
Databases	MS SQL Server, PostgreSQL, MySQL, T-SQL, PL/SQL, Stored Procedures,
Other Skill	Troubleshooting, Documentation, Problem Resolution

EXPERIENCE

Dec 2025 – Present

Genie US Tech : Cloud Support Engineer

• Managed and administered Linux servers (Amazon Linux, Ubuntu) on AWS EC2, performing system configuration, user management, and package installations using YUM and APT package managers

• Configured AWS VPC infrastructure including subnets, route tables, internet gateways, and NAT gateways, and implemented CloudFront CDN for content delivery optimization

• Configured Nginx web servers for application hosting and monitored server performance using CloudWatch, analyzing system metrics and resolving performance issues

• Managed AWS infrastructure including EC2 instances, S3 storage, security groups, and IAM roles while performing system troubleshooting and incident resolution

KEY PROJECTS

Production-Ready 3-Tier Web Application on AWS
EC2, VPC, RDS Aurora, ALB, CloudWatch
- Architected and deployed a highly available 3-tier application with Multi-AZ architecture achieving 99.9% uptime.
- Designed a secure VPC with tier-based isolation: 5 security groups, 3 route tables and least-privilege IAM roles.
- Achieved 60-70% AWS cost reduction via rightsizing, automated resource management and idle-resource cleanup.

Load Balancer Configuration for Web Application
AWS, ALB, ELB, EC2, Auto Scaling
- Implemented ELB with EC2 Auto Scaling Group for dynamic traffic handling and high availability.
- Configured an ALB distributing traffic across instances, improving fault tolerance and response times; monitored traffic patterns with CloudWatch to tune the configuration.

Static Website Deployment on AWS EC2 using Nginx
EC2, Nginx, Linux
- Deployed a static website on EC2 with Nginx for secure, scalable hosting; configured a custom dark-mode UI and 404 error handling.
- Managed the Linux server end to end: installation, configuration and performance tuning.

VPC Peering & Network Optimization
VPC, Route Tables, Subnets, IGW
- Implemented VPC peering for seamless communication between disparate cloud environments, with routing built on route tables, internet gateways and subnets.
- Reduced latency and improved efficiency through optimized routing and post-implementation monitoring.

EDUCATION

Bachelor of Engineering – Civil Engineering
SANT GAGDGE BABA AMRAVATI UNIVERSITY| CGPA: 6.86/10

CERTIFICATIONS & BADGES

- **AWS Cloud Quest: Cloud Practitioner** – Amazon Web Services (Trained)
- **AWS Certified Cloud Practitioner** – Amazon Web Services (In Progress)
- Credly Portfolio – (**https://www.credly.com/users/gaurav-lokhande.7c362d98**)

CORE COMPETENCIES

DevOps Engineer • Cloud Engineer • Site Reliability • Database Administrator • AWS • VPC • EC2 • IAM • ALB/ELB • Auto Scaling • S3 • Route 53 • CloudWatch • CloudTrail • Lambda • RDS Aurora • Multi-AZ • VPC Peering • Cloud Migration • Cost Optimization • Kubernetes • EKS • Docker • Terraform • IaC • CI/CD • Jenkins • GitLab CI/CD • CodePipeline • GitHub Actions • Release Management • Prometheus • Grafana • ELK • Observability • Nginx • Linux • Shell/Bash
